

## Dual transil array for ESD protection

### General Description

The RSTD2Z25V is a dual monolithic voltage suppressor designed to protect components which are connected to data and transmission lines against ESD. It clamps the voltage just above the logic level supply for positive transients, and to a diode drop below ground for negative transients. It can also work as bidirectional suppressor by connecting only pin1 and 2.

### Applications

- Computers
- Printers
- Communication systems

It is particularly recommended for the RS232 I/O port protection where the line interface withstands only with 2kV ESD surges.

### Features

- 2 Unidirectional Transil functions
- Low leakage current:  $I_R$  max < 20  $\mu A$  at VBR
- 300W peak pulse power(8/20  $\mu s$ )
- High ESD protection level: up to 25 kV
- We declare that the material of product compliance with RoHS requirements.

### Benefits

- High ESD protection level
- up to 25 kV. High integration.
- Suitable for high density boards.

### Complies with the following standards

IEC61000-4-2 Level 4

MIL STD 883c - Method 3015-6 Class 3

(Human Body Model)

### Absolute Ratings ( $T_{amb}=25^{\circ}C$ )

Symbol	Parameter	Value	Units
$P_{PP}$	Peak Pulse Power ( $t_p = 8/20\mu s$ )	300	W
$T_L$	Maximum lead temperature for soldering during 10s	260	°C
$T_{stg}$	Storage Temperature Range	-55 to +150	°C
$T_{op}$	Operating Temperature Range	-40 to +125	°C
$T_j$	Maximum junction temperature	150	°C
$V_{PP}$	Electrostatic discharge MIL STD 883C -Method 3015-6 IEC61000-4-2 air discharge IEC61000-4-2 contact discharge	25 16 9	kV

**Fig2.** Peak pulse power versus exponential pulse duration( $T_j$  initial=25°C)

**RSTD2Z25V****Application Note**

Electrostatic discharge (ESD) is a major cause of failure in electronic systems. Transient Voltage Suppressors (TVS) are an ideal choice for ESD protection. They are capable of clamping the incoming transient to a low enough level such that damage to the protected semiconductor is prevented.

Surface mount TVS arrays offer the best choice for minimal lead inductance. They serve as parallel protection elements, connected between the signal line to ground. As the transient rises above the operating voltage of the device, the TVS array becomes a low impedance path diverting the transient current to ground.

The tiny SOT23 package allows design flexibility in the design of high density boards where the space saving is at a premium. This enables to shorten the routing and contributes to hardening against ESD.

### Reel Dimensions

Metric Dimensions Govern — English are in parentheses for reference only

### Storage Conditions

Temperature: 5 to 40 Deg.C (20 to 30 Deg. C is preferred)

Humidity: 30 to 80 RH (40 to 60 is preferred )

Recommended Period: One year after manufacturing

(This recommended period is for the soldering condition only. The characteristics and reliabilities of the products are not restricted to this limitation)
